

India produces LNG for the first time with Galileo Technologies equipment

Thanks to the Cryobox technology, developed by Galileo for the liquefaction for Gail Limited India's leading natural gas company, will be in charge of supplying LNG to both industries and public transport.

Galileo Technologies achieves a global milestone by carrying out the first production of Liquefied Natural Gas (LNG) for Gail in India, marking a significant advance in Asia's energy development. For this operation, Cryobox units connected to state gas pipelines are being used. These condense all the capabilities of a large-scale LNG plant into a compact, transportable module that shares the standard components and the main features of Galileo's compressor packages: modularity, low weight, transportation advantages and easy of installation.

The operation is being carried out by Gail, a public sector entity belonging to the Ministry of Petroleum and Natural Gas of the Government of India, and will supply industries and public transport in the country.

"We are proud to be pioneers in the first LNG production in India and appreciate Gail's trust in our technology. This milestone not only represents an exciting challenge, but also gives us the opportunity to extend our portfolio of solutions with significant potential in this region," highlighted Emilio Weber, International Commercial Director of Galileo Technologies. He added: "Collaborating with the environment environment, LNG production will help reduce pollution in India and replace harmful fuels such as diesel or coal with planet-friendly energy."

About Galileo Technologies

Galileo Technologies is a leading company in the engineering and manufacturing of high-value-added energy solutions. For more than 30 years, it has been dedicated to expanding access to energy sources associated with carbon footprint reduction. Characterized by its modularity and scalability, Galileo's technologies provide solutions for the production, distribution, and consumption of Compressed Natural Gas (CNG), Liquefied Natural Gas (LNG), Renewable Natural Gas (RNG), and Hydrogen (H2). With corporate offices and service hubs in the United States, Argentina, Brazil, and France, Galileo Technologies markets and provides ongoing support to 70 countries worldwide.
